Test Comments: The test site this year experienced standing water in low spots that reduced plant stand and yield. Replications were removed from each test obtain reliable results. Root lodging that affected some hybrids was noted. Rain throughout this area had a major impact on field low areas, due to the ponding. Mark Formo, our host farmer, said that his yields around our plot averaged around 190 bpa.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
