**Test Comments:** In June, the site received 6" of rain that helped the crop get through a very dry July in good condition. During the last week of July, rains started to fall adding yields. This season, the crop was slow to mature and grain moistures are over 20 percent at harvest. We had goosenecked corn in parts of the plot and caused harvest issues. Some wildlife damage in certain areas added to yield variability.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
