**TEST COMMENTS:** This test site had an excellent stand and looked great early on. During mid-summer observations, we noticed quite a few varieties had large numbers of pods containing 4 beans. Overall, the test site received slightly above average rainfall through late August. September rainfall was quite limited. Tim, our host grower, indicated that the field surrounding the test averaged around 40 bu/acre.

† See last page for abbreviation descriptions. Results in bold are significantly above test average by LSD (0.10). ns = column values not significantly different.
