Test Comments: *The plot was planted in early May, about a week before the surrounding field. The growing season was estimated 18% wetter and 6% warmer than the 10-year average, which helped fill large cobs to the tip with large full kernels. At harvest, stalks had minimal lodging. Marvin said that the surrounding field averaged around 230 BPA, with areas around the plot pushing 300 BPA on the yield monitor.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
