Test Comments: Soil conditions at planting were dry. Surface and subsoil moisture was low due to a dry previous year. The early growing season remained drier than average until July. This area received an estimated 10 to 17 inches of rain in July. At harvest, most hybrids had cobs filled to the tips. Despite same day planting, Tony's surrounding corn was taller, healthier looking, and yielded more.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
