Test Comments: *Planting in the Wendell area was delayed due to wet field conditions. The plot was planted a few days prior to Chad planting the surrounding field. This field received adequate rainfall throughout the year, missing the dry conditions the northern areas experienced. The warm growing season helped provide dry grain moistures. Weather has made harvest a battle in most of the Red River Valley.*

Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
