Test Comments: *This area had a dry spring and experienced a moderate drought most of the growing season. At the V5 growth stage in mid June, corn leaves had curled up. Enough rain came to produce great yields. Scott, our host farmer, harvested the headlands on many of his fields and was surprised to see yields over 200 bu/ac in all of his fields. Stalk health was good. Grain is slow to dry due to wet fall weather.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
