**TEST COMMENTS:** *Planting was slow to start in this area due having a large accumulation of winter snow and rainy late April into early May. The plot looked remarkable throughout the growing season. Strong wind storms knocked plants over late in the growing season making them difficult to pick up with the combine. Right before harvest, the site received nearly 14" of snow, another contributor to the lodging score.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
