### TEST COMMENTS:

We waited to plant this area as wet conditions delayed spring fieldwork. Very good conditions when we planted in May. In June the plot looked very even and was in good condition. At harvest, we had good stalk health and no lodging could be seen. The grain moistures were good with only a few over 20 percent. This plot area missed some of the rain that came in July and August and rainfall was at a premium as soils dried out later in the growing season. We still had good yields here in large part due to good subsoil moisture.
