### TEST COMMENTS:

The growing season was drier than average, with May through July being well below the 10 year average for precipitation. Small, but timely rains helped the plot through the worst of the dry spell, and normal rainfall in the month of August helped this field yield well. Chad said that there was a wide range in yields throughout the area; lighter ground faired worse than heavier soils. Some hybrids had minimal stalk lodging at harvest, which was most likely caused by very high winds a week before harvest.
