TEST COMMENTS:

Late planting conditions were common across the region this year, with this location being planted a few days before the surrounding field, which was planted on Memorial Day. Timely rains in this area helped crops make the most of late planting. Tim said that the 84 day he grew around the plot was around the 190 BPA mark and that he was pleased, given such late planting. At harvest, some green snap was noticed among some varieties caused by a high wind event earlier in the growing season. Many products in the full-season test had high ear placement with thick and firm stalks.
